Air-conditioned & Heated Luxury !
Temperature range from 17 - 30 degrees with Humidity Control.

Safe & CE approved 12V power supply with metallic mesh outer shell preventing accidental severs and increases safety.

The stunning looks, unique shape and colour makes you fall in love at first glance. The Cool Pet House is packed full of features including, indoor LED cool lighting and quiet fans to improve the living experience. The user can manipulate the inside temperature, activate a wireless webcam, and much more. The Cool Pet House is the **WORLDS ONLY** pet house to truly care for the demands of pets, owners and breeders worldwide. In fact, the Cool Pet House has eight newly invented features that you will not find in any other pet houses on this planet!

- * Regardless of climate the Cool Pet House will keep pets cool in summer and warm in winter at the touch of a button and being themostatically controlled ensures constant temperatures from a cool 17 degrees up to a balmy 30 degrees using state of the art thermoelectric technology.
- * The built in humidifying system will automatically provide controlled moisture by maintaining a humidity level of 50% - 60% whilst in operation mode.
- * The dehumidifying system prevents excessive humidity by working silently in the background removing unwarranted inside moisture and preventing unnecessary bacteria growth.
- * All operation functions are at your fingertips and displayed with simple easy to understand graphics via the advanced integrated remote control. The remote control will adjust lighting, temperature settings and even operate the optional wireless webcam + more.
- * The optional WI-FI (wireless) Web Cam allows access of online video streaming surveillance from any internet PC anywhere in the world! Whilst at work, on the road or on holiday you can monitoring your pets 24/7, even access viewing from your mobile phone. Multilingual installation guide provided.
- * Anti Temperature Shock System (ATSS) buffer areas maintain a range of not more than 10 degrees in difference between inside and outside temperatures. ATSS ensures that pets are not being exposed to excessive temperature differences.
- * The Cool Pet House only uses an amazing 12V per hour to all components and the custom designed supply cable is covered in a wire mesh to increase cord durability preventing accidental severs.
- * The assembly of the Cool Pet House is a simple 4 step process. No tools or screws are required thanks to its innovative Klip-Lok design. All components lock together making the Cool Pet House ideal for easy assembly and transporting.

SUMMARY OF FEATURES:

(A) OUTSIDE FEATURES

LED Indicators - The logo located above the front door is designed with a set of LED Indicators which indicate the operation of various unique functions of the Cool Pet House.

Superior Padded Roof - The roof was designed to insulate the pet house and prevent unnecessary injury to pets and people. The roof is removable and washable once it is detached from the roofing support.

Plastic Walls - The walls are made of a rigid thermal plastic that insulates the house from the outside elements.

Plastic Flap Door - These doors provide pets with easy access in and out of the structure and assist in temperature control.

Temperature Control Unit - Operational temperature control unit located in the rear of the house. Temperatures may be set using the remote control to reach a low of 17°C and a high of 30°C using advance thermoelectric technology.

Power Connection Point - Cylindrical plug design prevents the possibility of unwanted electrical discharge.

AC adaptor with cable - The cables in and out of the AC adaptor are covered in a wire mesh to increase cord durability preventing accidental severers.

Remote control - The Electronic Control System features a Liquid Crystal Display (LCD) which shows all your input operations with simple easy to follow graphics powered by 2 x AAA batteries.

(B) INSIDE FEATURES

Roof Support Rod - A rod spanning from the upper rear wall to the upper front wall used to support the pet house roofing.

Interior LED lights - Energy efficient, providing lighting to clearly view resting pets at all times of the day when using the wireless IP webcam. LED lights are safe and remain cool at all times unlike traditional bulbs.

IP Web Camera - A very important optional feature which will provide a video surveillance camera inside the pet house to monitor pet activity throughout the day. The wireless signal can be transferred to your TV screen or be sent online over the internet for remote monitoring.

Cushion and Lining - Cushions and lining are installed to further insulate the pet house and provide a comfortable living space for pets. They are removable and washable for easy maintenance.

Mini Exhaust Fan - Odours and air are circulated out via the Mini Exhaust Fan.

Buffer Area (Anti Temperature Shock System) - The buffer is engineered for the purpose of preventing large temperature indifferences which may cause pets undue stress. The Cool Pet House is designed with buffer areas to avoid pets from being exposed from large differences in temperature from outside to inside.
